JUNCTIONX TURKU 2026 · IF INSURANCE COULD DO MORE

If Life Partner

An app that helps people take care of their home before something goes wrong. And gives them a reason to stay with If while they do it.

Antton · Ege · Rasi

THE MOMENT

An older home comes with a report that says “much to repair”.

The owner does not know:

- what matters most,
- whom to call,
- what waiting will cost.

Insurance meets the customer too late

A fire from an old fuse box. A water damage from old pipes. Today that is the moment the customer meets If.

We want If to be there before.

THE IDEA

From a report to a reward, in six steps.

1

Upload

The customer uploads an inspection report (kuntotarkastus).

2

Read

A model reads the facts. Code decides the risks.

3

See

Up to 5 risks, most serious first, with proof from the report.

4

Book

One tap books an If-vetted partner.

5

Confirm

The partner confirms the work. Only outside proof counts.

6

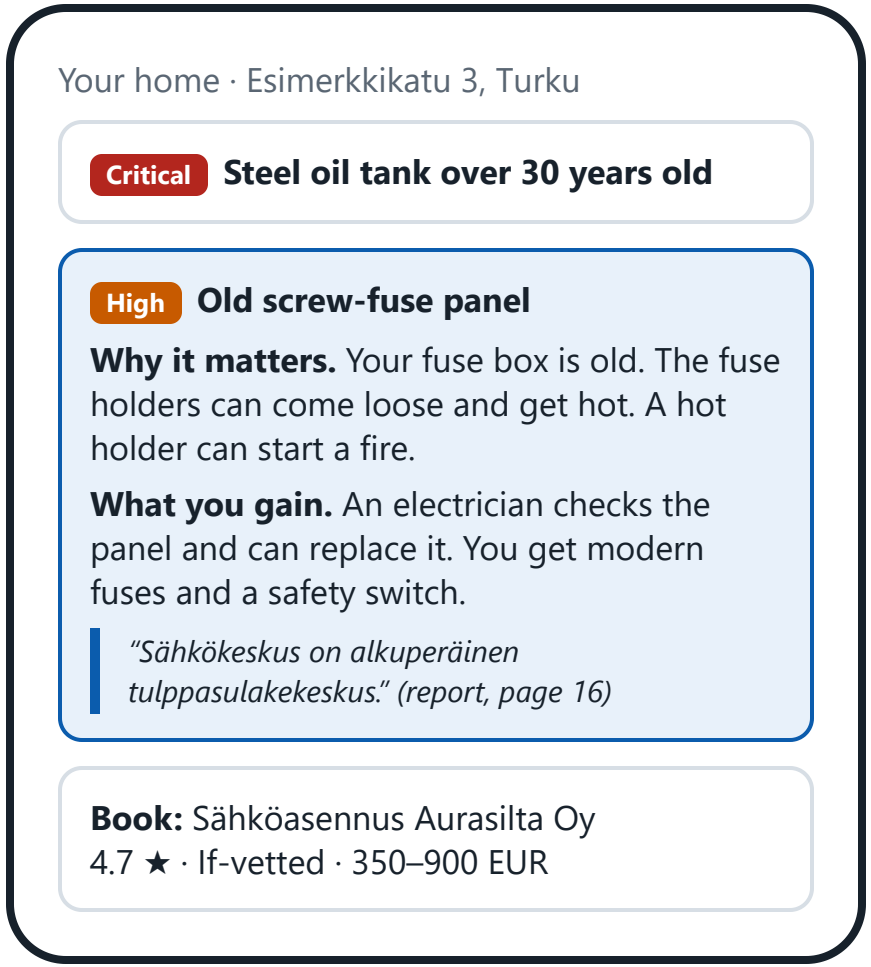

Reward

The care score rises. Tiers unlock rewards.

Demo: a 68-year-old owner in Turku books an electrician for an old fuse box. The score goes **486** → **546** and unlocks **Silver**.

THE DEMO

One risk, with a reason, a quote and a partner.

What the owner sees:

- Plain words. No expert terms.
- The sentence from the owner's own report.
- Partners with rating, price and discount.
- After the work: **+60 points** and a tier up.

Sketch of one screen. The real app is designed in Lovable.

CRITERION 1 · CUSTOMER VALUE AND RELEVANCE

The owner knows what to fix, who does it, and what they gain.

BEFORE	WITH IF LIFE PARTNER
A long report in technical Finnish	5 risks, in order
A search for a contractor	Vetted partners on one card
No proof the work was done well	The partner confirms. A record stays.
No reason to keep going	A score, tiers and a maintenance list

What the owner protects

Safety. Money. And the insurance position: a new panel restarts the age that cuts payments on old electrical equipment.

Made for the average Finn

Simple screens, plain words, Finnish, Swedish and English. A relative can help, with the owner’s permission.

CRITERION 2 · BUSINESS VALUE FOR IF

Eight ways the service pays off for If.

Fewer claims

Each confirmed fix removes a cause of damage.

Verified data

Underwriters see the real state of the home and its source.

Better claims

Maintenance history and proof of work are ready.

Retention

Reminders, a score and a list bring the customer back.

Acquisition

Report upload and Silver offers reach non-customers with verified data.

New income

Partners pay to be listed and fund the discount.

Insight

Sales and product teams see real needs.

Terms as a to-do list

The risks come from If's own home insurance terms.

Precedent: Kunnon Koti, a partner inspection every 4 years. We make it continuous, scored and rewarded.

CRITERION 2 · BUSINESS VALUE FOR IF

Rewards that cost If little.

Bronze

0 – 499
No reward yet

Silver

500+
5% partner discount
Offers on If products

Gold

750+
10% discount
−100 EUR deductible
“If may offer a better price“

Platinum

850+
15% discount
−200 EUR deductible
“If may offer a better price“

Partner discount

Paid by the partner, for volume. Costs If nothing.

Lower deductible

Costs If only when a claim happens.

Better premium

Never automatic. If decides, case by case.

Only outside proof moves the score. Answers alone cap at about 450. False information sets the benefit score to 0.

CRITERION 3 · FEASIBILITY AND SCALABILITY

Code decides. Models read and write.

Report
A standard Finnish inspection report (KH 90-00394)

→

Model reads
Extracts facts with source, quote and confidence

→

Code matches
Facts to risk catalogue. Severity, points and partner come from the catalogue only.

→

Model writes
Plain customer text from catalogue hints

→

Code picks
Partners and the maintenance list

Safe

A model cannot change a risk, a score or a price. It can only select catalogue ids. A person can review every text.

Private and cheap

The model runs on local hardware. Customer documents stay in the system.

CRITERION 3 · FEASIBILITY AND SCALABILITY

Built now, and how it grows.

PART	STATE
Backend, jobs, risk list	Code in place
Reading synthetic reports	Code in place
Risk catalogue	20 in code, 58 designed
Partners, prices, confirmation	Mock
Score numbers, tiers, rewards	Mock
Strong e-ID, ownership check	Not built

How it scales

- **More risks:** one catalogue entry each.
- **More things to care for:** a car, a marriage, a new child. A new catalogue and score.
- **More partners:** 14 types defined, with the proof each one gives.
- **More languages:** plain text translates well.

Before launch: calibrate with If claim data, onboard partners, add strong e-ID, check premium rules.

CRITERION 4 · INNOVATION AND EXPERIENCE

Insurance is not the centre. The home is.

From claim time to care time

If helps with the work itself: what to fix, who does it, what it gives back.

Proof, not promises

The score moves only when an outside source confirms a fix. The customer cannot fake it.

Terms as a to-do list

Sweep the chimney. Test the alarms. Close the main valve. Rules few customers read become tasks.

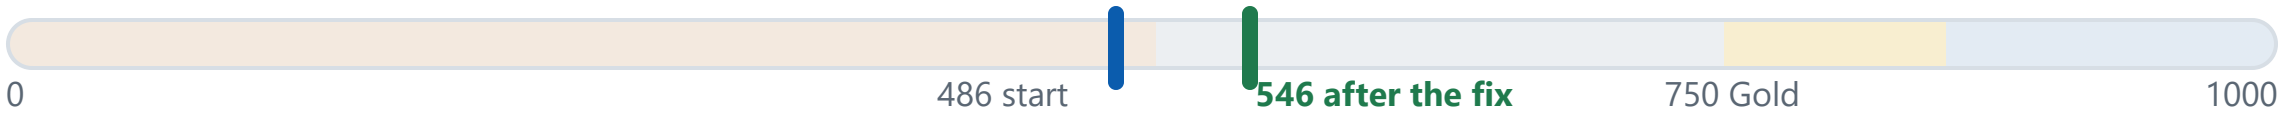

Traceable to the customer’s own words

Every risk shows the quote and the page. Unknown facts stay marked as unknown.

CRITERION 4 · INNOVATION AND EXPERIENCE

Short, calm and rewarding.

	GENERIC INSURANCE APP	KUNNON KOTI TODAY	IF LIFE PARTNER
When	At purchase and at a claim	Every 4 years	Continuous
Customer gets	Policy and claim forms	A report	Ranked risks, partners, reminders
Proof of care	None	One report	Confirmed fixes with dates
Reward	None	None on the premium	Score, tiers, discounts, offers

WHAT COMES NEXT

A working house service first. Then everything people care for.

Phase 1 · now

The house: upload, risks, partners, maintenance list, score.

Phase 2

Full functionality, partner network, a view for If staff.

Phase 3

Finnish and Swedish. Then the car, and life events such as marriage or a new child.

Honest scope

Partners, prices, score numbers, tiers and discounts are mock data. The risk values are first estimates. The mechanism is real: read the customer’s document, match it to a catalogue, and reward outside-confirmed fixes.

IF LIFE PARTNER

Insurance that shows up before the damage.

Customer — knows what to fix and gets a reward.

Feasible — code decides, models read and write.

If — fewer claims, verified data, loyal customers.

New — insurance in the care phase, with proof.
